

## TECHNICAL INFORMATION

### **What about ice generators ?**

The Geneglace sas policy aims to improve its technology and the reliability of its equipment for the satisfaction of the world users. We are bringing improvements to our flake ice generators with focus made on performance & efficiency, hygiene and durability while preserving competitive prices.

### **Labelling for a better water level assessment**

As you know, this point is a very important point to set the right production of the machine. The base and the water tray levels must be correct to ensure the right water pressure on the cylinder as well as the best ice quality.

The level must be sufficient to prevent the cavitation of the pump through lack of water in one hand and to prevent water overflow on the other hand.

In order to facilitate the adjustment and to guarantee the best of our machines, we have decided to mark our distribution tray as well as the water tray. This marking will allow the technicians to check the correct water level very quickly.

This marking will be adapted to the type of machine proposed.

### **As a reminder, correct levels water in upper water distribution tray for exemple are :**

- F15 & F30 : 15 mm
- F90, F100T, G100 : 25 mm
- F200, F250, F600 : 35 mm
- F800, F900, F2000 : 50 mm

In les Sorinières 22/03/22

The next F200 and F250 machines will be delivered with that modification and next models will follow.
